

PE Modification, Stretch Film

Cling Property, Elongation and Transparency

TAFMER™ A

Ethylene based α -olefin copolymer

TAFMER[™] A is miscible with polyethylene (PE). It is used as a modifier of PE to improve Cling Property, Flexibility, Elongation and Transparency.

General characteristics attributed to TAFMER™ A:

- Low Young's Modulus for Softness and Flexibility
- Low Crystallinity & Miscible with PE for Cling Property, Elongation and Transparency

Cling Property

The cling force of PE is not sufficient for practical use. TAFMER[™] A is added to improve cling force.

Film Properties

TAFMER[™] A also acts as flexibility, elongation and transparency modifier.

FDA

All the monomers and additives used in the above TAFMER™ grade are listed in the "Code of Federal Regulation, title 21 Food and Drugs, Parts 170 to 189" and "FCN (Food Contact Notification)".

EU Directive

All the monomers and additives used in the above TAFMERTM grade are listed in the EU Directive 2002/72/EC and its amendment 2008/39/EC.

The only additives with Specific Migration Limit (SML) are:

n-Octadecyl 3,5-di-t-butyl-4-hydroxy hydrocinnamate (CAS No.2082-79-3, Ref No.68320) : SML= 6mg/kg

Please ensure that the SML and Overall Migration (OM) are within the specified value in the end-use products,.
